**SUMMARY:** 2+ years of ML and Data Science experience. 5+ years in biochemical research.  
Red diploma alumnus of Lomonosov Moscow State University.

## WORK EXPERIENCE

- **Project leader**  *March 2023 – Present* • **Higher School of Economics University, Russia**
  - Project: Prediction of outcomes for cardiovascular patients based on clinical data.
  - Stack: Python, Git, Bash, SQL, scikit-learn, imblearn, MLxtend, CatBoost, Pandas, NumPy
    - o Demonstrated biomarkers' predictive capabilities (up to 5% AUROC increase).
    - o Proved biomarkers' effectiveness using feature selection and model interpretation SHAP algorithm.
    - o Developed project workflow and earned grant support of federal academic leadership program "PRIORITY 2030".
    - o Submitted article for publication in "AI in medicine" peer-reviewed journal.
- **Data Scientist** *February 2022 – March 2023*
  - o Developed ML-models targeting 2 most common complications and combination of every complication.
  - o Determined 2 primary predictors by feature selection algorithms: SHAP and FFS, retaining  $F_2 > 0.6$  and AUROC  $> 0.8$ .
  - o Increased Recall by 9% by tuning models with  $F_2$  metric.
  - o Published results at the "Cardiology on the march" conference. 
- **Intern** *November 2021 – February 2022*
  - o Medical data preprocessing, imputation, and analysis; ML model training for combined target prediction.
  - o Presented project results at "AI in personalized medicine" conference. 
- **Research Fellow** *June 2018 – May 2023* • **Lomonosov Moscow State University, Russia**
  - Project: Advancement of DNA detection methods by integration of isothermal amplification systems.  [1](#), [2](#), [3](#)
  - Project: Immunoassays improvement for group-detection of antibiotics and sensitivity enhancement.  [4](#), [5](#)
    - o Raw experimental data preprocessing and analysis.
- **Research Intern** *June 2019 – July 2019* • **Queen's University Belfast, United Kingdom**
  - Project: Development of smartphone-based quantification systems for colorimetric assays.  [6](#)
    - o Statistical analysis of images for color change extraction.

## EDUCATION

- **BSc & MSc in Fundamental and Applied Chemistry** *Sep 2017 – June 2023* • **Lomonosov Moscow State University, Russia**
  - Major: Nanobiomaterials and nanobiotechnologies
  - GPA: 4.97/5, Red diploma
  - Academic council Scholarship: top-10 MSU students for scientific achievements
- **Scientific schools**
  - **Neural networks and their applications in research** *top-50 MSU students*
    - o Scholarship: top-25 based on ML competition and academic results
    - o Stack: Python, PyTorch, scikit-learn, MLxtend
  - **School of Biomedical Data Analysis** *top-100 students nationwide*
    - o Stack: Python, Bash, R, SQL, Git, Snakemake
  - **Pharmacokinetics modeling for drug-development** *top-30 students nationwide*

## INDIVIDUAL PROJECTS

- **COVID-19 Vaccination Prognosis**  
  - Used Kaggle dataset to make prognosis for end-date of vaccination programs against COVID-19.
  - Reported countries with successful vaccination programs that achieved herd immunity.
  - Stack: Python, scikit-learn, Pandas, NumPy, Plotly, Git, Bash
- **Delivery Club Sales Prediction**  
  - Created ML model for weekly sales prognosis in Delivery Club app to minimize the company's logistics costs.
  - Improved MAE by 2.4 points by reconfiguring features (one-hot encoded cities and lag features).
  - Stack: Python, scikit-learn, Pandas, NumPy, Plotly, Git, Bash
